

IN THE CLAIMS:

Please cancel claim 4 without prejudice or disclaimer of subject matter and amend claims 1, 5 and 6 as shown below.

1. (Currently Amended) A solid dosage form of a pharmaceutically active substance selected from the group consisting of pharmaceutically active water soluble gaseous substances, ethyl alcohol, L-carnitine, pantothenic acid, pyruvate, and combinations thereof, comprising a magnesium oxychloride cement in which the pharmaceutically active substance is entrapped, wherein the magnesium oxychloride cement is made up by mixing a clear magnesium chloride solution containing the pharmaceutically active substance with magnesium oxide powder to form a paste which is then allowed to set over time into a solid composition which composition is then optionally crushed and milled to the desired fineness.

2. (Original) The solid dosage form of claim 1 in which the cement is in the form of a powder packed in a capsule.

3. (Original) The solid dosage form of claim 1 in which the cement is in a compressed tablet form.

4. Canceled.

5. (Currently amended) The solid dosage form of any one of claims 1 to [4] 3, wherein the entrapped pharmaceutically active substance is nitrous oxide.

6. (Currently amended) A method of producing a solid dosage form of a pharmaceutically active compound comprising the steps of forming a [dear] clear basic aqueous solution of the compound, dissolving magnesium chloride hexahydrate into that solution and using the resultant solution to form magnesium oxide powder into a paste,

solution and using the resultant solution to form magnesium oxide powder into a paste, allowing the paste to set into a solid composition and, if desired, grinding the set composition into a powder.

7. (Original) The method of claim 6 wherein the pharmaceutically active compound is selected from the group consisting of pharmaceutically active water soluble gaseous substances, ethyl alcohol, L carnitine, pantothenic acid, pyruvate, and combinations thereof.
